

PATIENT NAME:

Date:

SURGEON: Gagan J. Singh, M.D.

PREOPERATIVE DIAGNOSIS: Opacified posterior capsule OD / OS

POSTOPERATIVE DIAGNOSIS: Opacified posterior capsule OD / OS

OPERATION: YAG Laser Capsulotomy

ANESTHESIA: Topical – Proparacaine 1/2%

PROCEDURE: Topical Proparacaine 1/2% was placed in the patient's eye. The patient was positioned at the YAG laser. An Abraham capsulotomy lens was placed in the eye using Goniosol. The opacified capsule was in the visual axis. In the area, a series of \_\_\_\_ laser pulses, each approximately \_\_\_\_ millijoules in power, was used to create an opening in the opacified capsule. At the conclusion of the procedure, the capsule seemed to be opened, well centrally, and the lens was removed from the eye. The patient tolerated the procedure and left in good condition.
