

ECTROPION REPAIR

NAME:

DATE:

SURGEON: Gagan J. Singh, M.D.

PREOPERATIVE DIAGNOSIS: Ectropion Right / Left

POSTOPERATIVE DIAGNOSIS: Same

OPERATION: Repair of Ectropion

PROCEDURE: The patient was prepped and draped in the usual manner. Injection of Xylocaine 2% with Epinephrine was given in the infraorbital and lacrimal nerve area so that anesthesia was obtained in the lower lid. Tetracaine was placed in the operated eye. Following this, a lid clamp was placed on the lower lid and an incision was made through full thickness lid using a #15 blade. A wedge excision was made measuring about 0.7 cm. Upon completion of the excision, #6-0 silk sutures was used to close the lid margin. #5-0 chromic gut was use to approximate the deep tissue. Hemostasis was achieved with cauterization and pressure. At the completion of these, the lid clamp was removed. Patient tolerated the procedure well.

Gagan J. Singh, M.D.
